Q1. **What's your preferred option for getting two water pipes across the Mataura River?**

Should we look at combining the water pipes with a walking and cycling bridge?

Q2. **Rank these four options for a bridge from one to four, with number one being your favourite**

1. Option D: Multi-span bridge at Rock Street
2. Option C: Multi-span bridge at Halton Street
3. Option B: Multi-span bridge at Surrey Street
4. Option A: Multi-span bridge at Maitland Street.

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

Proximity to Gore CBD. Accessibility for other community activities. Visibility and location for ease of access.

Q4. **Are there any further comments you would like to make about this project?**

A link for walking and biking is a great idea! This could well be a priority and focus of a council project - to get this and solve the water issue (& access relevant external funding) is great. Please go ahead and make this happen for our community. Great draw card to living in Gore.

Q1. **What's your preferred option for getting two water pipes across the Mataura River?**

Should we look at combining the water pipes with a walking and cycling bridge?

Q2. **Rank these four options for a bridge from one to four, with number one being your favourite**

1. Option C: Multi-span bridge at Halton Street
2. Option D: Multi-span bridge at Rock Street
3. Option B: Multi-span bridge at Surrey Street
4. Option A: Multi-span bridge at Maitland Street.

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

Economically makes the most sense & is the best position for walking bridge to capture East Gore residents & nice distance to walk over main bridge & back over this one

Q4. **Are there any further comments you would like to make about this project?**

Would be great to see it finished & in use without years going by with no action

Q1. **What's your preferred option for getting two water pipes across the Mataura River?**

Should we look at combining the water pipes with a walking and cycling bridge?

Q2. **Rank these four options for a bridge from one to four, with number one being your favourite**

1. Option C: Multi-span bridge at Halton Street
2. Option D: Multi-span bridge at Rock Street
3. Option B: Multi-span bridge at Surrey Street
4. Option A: Multi-span bridge at Maitland Street.

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

This location provides the best linkages with the existing paths and is a good balance between location to Jacobstown wells and being useful for transport links. The other two options will have a significant impact on residents at the end of Halt and Rock Streets, while Surrey St is already used to extra traffic.

Q4. **Are there any further comments you would like to make about this project?**

Please pick the bridge option! We've only moved to Gore in the last 2 years, but we love the town. GDC do a great job of making the town attractive, the plantings are incredible. This bridge will become an iconic part of Gore in the next 20 years. I love walking and running along the river - but hate crossing the bridge, I feel for the kids riding their bikes across as a stock truck rumbles past a few metres away on State Highway 1. This bridge will make our town even more beautiful, more practical to navigate and make the most of the Mataura River. Can you suggest the people against the bridge spend some time crossing it on foot or on a bike - I'm sure it will change their minds... Also, thanks for the consultation and for all the work you do for Gore - it's truly an amazing town and we feel lucky to live here.

3. Option B: Multi-span bridge at Surrey Street
4. Option A: Multi-span bridge at Maitland Street.

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

Surrey St makes sense for the crossing, its lowest cost, best chance for waka kotaho funding and would be 100% better than the stupid underground pipe idea.

Q4. **Are there any further comments you would like to make about this project?**

BUILD A BRIDGE!

Q5. **Name** Kathryn Baynham

Q1. **What's your preferred option for getting two water pipes across the Mataura River?**

Should we look at combining the water pipes with a walking and cycling bridge?

Q2. **Rank these four options for a bridge from one to four, with number one being your favourite**

1. Option D: Multi-span bridge at Rock Street
2. Option A: Multi-span bridge at Maitland Street.
3. Option B: Multi-span bridge at Surrey Street
4. Option C: Multi-span bridge at Halton Street

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

Provides walking, cycling options between areas. Stop bank to stop bank will hopefully avoid ongoing maintenance from future flooding. Future proofing transport options.

Q4. **Are there any further comments you would like to make about this project?**

Question number one asks a question then has two further questions as ‘answers’. This is confusing.

Q1. **What's your preferred option for getting two water pipes across the Mataura River?**

Should we focus on getting the pipeline across the river by drilling underneath it?

Q2. **Rank these four options for a bridge from one to four, with number one being your favourite**

1.

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

not answered

Q4. **Are there any further comments you would like to make about this project?**

why cant we put the water pipes on the railway bridge as there is an overhang on this bridge. it would have to be above the flood line. no new bridge to build, less clutter in the river for floating debris to hit when flooding.

Q5. **Name**

Kathleen Richardson

Q1. **What's your preferred option for getting two water pipes across the Mataura River?**

Should we look at combining the water pipes with a walking and cycling bridge?

Q2. **Rank these four options for a bridge from one to four, with number one being your favourite**

1. Option A: Multi-span bridge at Maitland Street.
2. Option C: Multi-span bridge at Halton Street
3. Option B: Multi-span bridge at Surrey Street
4. Option D: Multi-span bridge at Rock Street

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

Would be an asset to to gore having a loop walking, cycling track available. A lot of people would use it. Also shortest option for the pipes but also may not get the funding which is a downfall

Q4. **Are there any further comments you would like to make about this project?**

Don't to much time to make decision and get it done

Q5. **Name**

susan harris

Q4. **Are there any further comments you would like to make about this project?**

I believe that fundamentally your best options are to either drill it through under the river as this will be best protected against flooding/ and damage that one above water may incur. Next best option in my opinion is use what you've already got structure wise, there are two great bridges (main bridge and train bridge) there at your disposal you could easily get to fitted on one of them. But as we have learnt from previous bridge failures like the pyramid bridge in recent years when that blew out the otama water scheme pipe. I firmly believe that if you bury it under the river it will be there forever done and dusted with no maintenance required.

1. Option C: Multi-span bridge at Halton Street
2. Option B: Multi-span bridge at Surrey Street
3. Option D: Multi-span bridge at Rock Street
4. Option A: Multi-span bridge at Maitland Street.

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

This location provides the most direct connection for East Gore residents to West Gore amenities. It will become a focal point for recreational use of the Mataura River. It will reconnect Eastern Southland residents with the Mataura River Corridor.

Q4. **Are there any further comments you would like to make about this project?**

The town lacks connection to the river corridor. Considerable recreational amenity value could be achieved by providing improved pedestrian / cycle connection. An example of such is the recent Reaby Rd shared pathway which has resulted in a significant increase of pedestrian & cyclist usage of the road corridor. A bridge at the Surrey St location would provide safe efficient access for school pupils and commuters to West Gore commercial and recreational facilities. Runners, walkers and cyclists are hindered from accessing East Gore recreational areas due to the interface of the existing bridge with high vehicle traffic flow. A separate dedicated bridge would provide inspire more desire and confidence for would be users. It would be a huge lost opportunity if Council decided not to pursue a pedestrian bridge at this time.

Q1. **What's your preferred option for getting two water pipes across the Mataura River?**

Should we look at combining the water pipes with a walking and cycling bridge?

Q2. **Rank these four options for a bridge from one to four, with number one being your favourite**

1. Option D: Multi-span bridge at Rock Street
2. Option C: Multi-span bridge at Halton Street
3. Option B: Multi-span bridge at Surrey Street
4. Option A: Multi-span bridge at Maitland Street.

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

I think that a bridge that is closer to the town will be used by the most people. The further upstream of the river you place the bridge the more people that won't use it. We live in East Gore and have children that would use this bridge to cross the river often. We use the pedestrian crossing on the traffic bridge often but find it noisy.

Q4. **Are there any further comments you would like to make about this project?**

I did not mind the councils initial bridge ideas and designs. I can see the benefits of a cycle/walking bridge and would love to see this option go ahead

Q1. **What's your preferred option for getting two water pipes across the Mataura River?**

Should we focus on getting the pipeline across the river by drilling underneath it?

Q2. **Rank these four options for a bridge from one to four, with number one being your favourite**

1.

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

not answered

Q4. **Are there any further comments you would like to make about this project?**

not answered

Q5. **Name**

Pauline Adams

Q1. **What's your preferred option for getting two water pipes across the Mataura River?**

Should we look at combining the water pipes with a walking and cycling bridge?

Q2. **Rank these four options for a bridge from one to four, with number one being your favourite**

1. Option B: Multi-span bridge at Surrey Street
2. Option C: Multi-span bridge at Halton Street
3. Option D: Multi-span bridge at Rock Street
4. Option A: Multi-span bridge at Maitland Street.

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

Spot makes the most sense. Isn't too close to the existing bridge. Is the cheapest option.

Q4. **Are there any further comments you would like to make about this project?**

not answered

Should we look at combining the water pipes with a walking and cycling bridge?

Q2. **Rank these four options for a bridge from one to four, with number one being your favourite**

1. Option B: Multi-span bridge at Surrey Street
2. Option D: Multi-span bridge at Rock Street
3. Option C: Multi-span bridge at Halton Street
4. Option A: Multi-span bridge at Maitland Street.

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

Seems the most logicial place for it based on length, cost etc. It provides a good central location for East Gore and still gets you relatively close to the centre of town without the addition pipe lengths of the other options.

Q4. **Are there any further comments you would like to make about this project?**

The current pedestrian/cyclist route to town from East Gore is far from ideal and the possibilty of creating a bridge brings huge benefits, including safety.

2. Option B: Multi-span bridge at Surrey Street
3. Option C: Multi-span bridge at Halton Street
4. Option D: Multi-span bridge at Rock Street

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

Shortest distance in water pipeline. Direct line from Jacobson storage tanks. Provides better option away from residential houses & should encourage Walnut Grove to be utilized more as its near Maitland St.

Q4. **Are there any further comments you would like to make about this project?**

Why cannot water pipes be clipped to existing rail or road bridges ??

Q4. **Are there any further comments you would like to make about this project?**

I don't understand why in a time when the cost of living is substantially more than the average citizen makes, a local body government wants to do anything else than what is more cost effective and more economically better for the town. I dont like any of your ideas but in reality i suppose if a bridge turns up when it is the dearer option then you arent really thinking of the community on a daily basis, maybe the rumour that the bridge is already built is true?. This has been ongoing for such a long time its ridiculous. Is this really the most cost effective and best long term option you have. At the end of the day i don't think my voice matters anyway, as long as i pay my rates, which I am sure will increase significantly in coming years, I do not think the average citizen is the concern of the Council.

2. Option C: Multi-span bridge at Halton Street
3. Option D: Multi-span bridge at Rock Street
4. Option A: Multi-span bridge at Maitland Street.

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

I think walking and cycling options provide better safety particularly for kids travelling, but have otherwise ordered them by cost.

Q4. **Are there any further comments you would like to make about this project?**

What I didn't like about the last bridge option was that it looked unnecessarily fancy and expensive. I would like it to be efficient in cost, and if you can make it pretty with minimal additional cost that's fine but I don't think at the current time it is responsible to be putting additional costs on for fanciful reasons, especially when the cost of the bridge might increase during development anyway.

1.

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

not answered

Q4. **Are there any further comments you would like to make about this project?**

The council has already wasted a lot of time and nearly a million dollars on the bridge. Drill under the river and get the project done. The objections I had to the original bridge still stand. I will be looking at the underneath of the bridge if one is built at the original site and this is not acceptable to me

Q1. **What's your preferred option for getting two water pipes across the Mataura River?**

Should we look at combining the water pipes with a walking and cycling bridge?

Q2. **Rank these four options for a bridge from one to four, with number one being your favourite**

1. Option A: Multi-span bridge at Maitland Street.
2. Option C: Multi-span bridge at Halton Street
3. Option D: Multi-span bridge at Rock Street
4. Option B: Multi-span bridge at Surrey Street

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

A bridge that far up the river will add to the towns amenities by providing a river side walk / fitness facility

Q4. **Are there any further comments you would like to make about this project?**

If the Surrey street bridge went ahead it would need some security and camera options factored in as it will crate more foot traffic from East Gore directly into a commercial area

Q1. **What's your preferred option for getting two water pipes across the Mataura River?**

Should we look at combining the water pipes with a walking and cycling bridge?

Q2. **Rank these four options for a bridge from one to four, with number one being your favourite**

1. Option B: Multi-span bridge at Surrey Street
2. Option C: Multi-span bridge at Halton Street
3. Option A: Multi-span bridge at Maitland Street.
4. Option D: Multi-span bridge at Rock Street

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

I liked the original design and think it could have been a real asset to Gore and Surrey St would provide the cheapest option and provide a better alternative (than those closer to the existing bridge) for recreational walkers/cyclists as well as workers to the business/service area in that part of Gore.

Q4. **Are there any further comments you would like to make about this project?**

Having visited New Plymouth, I was very impressed with their Te Rewa Rewa Bridge which is well used by the public, for recreational purposes, and is a real tourist draw card for their whole district. I believe the original Gore bridge design would have been the same for Gore and it is a shame a small group of shortsighted people were able to stifle this plan, for their own interests, when it could have provided a large benefit for a far greater number of people and the district as a whole.

Q2. **Rank these four options for a bridge from one to four, with number one being your favourite**

1. Option B: Multi-span bridge at Surrey Street
2. Option A: Multi-span bridge at Maitland Street.
3. Option C: Multi-span bridge at Halton Street
4. Option D: Multi-span bridge at Rock Street

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

Less impact on residents along River Terrace - perhaps some visual impact. Still reasonably close to town for it to be an option for walkers/cyclists. Maitland Street option too far out of town for it to be regularly used by walkers/cyclists.

Q4. **Are there any further comments you would like to make about this project?**

2nd preference would be drilling under the river. Don't think the other 3 bridge options are suitable.

Q1. **What's your preferred option for getting two water pipes across the Mataura River?**

Should we look at combining the water pipes with a walking and cycling bridge?

Q2. **Rank these four options for a bridge from one to four, with number one being your favourite**

1. Option C: Multi-span bridge at Halton Street
2. Option B: Multi-span bridge at Surrey Street
3. Option D: Multi-span bridge at Rock Street
4. Option A: Multi-span bridge at Maitland Street.

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

spans from stop bank to stop bank so access not restricted. Difficult to chose between the options. B C or D would be my choice. Waka Kotahi funding would be great! but need to think what would be most used by the community.

Q4. **Are there any further comments you would like to make about this project?**

BIG YES to the walking/cycling bridge! this is such a great asset to the town and putting in the pipelines is such a great opportunity! Difficult to chose between the options. B C or D would be my choice.

Q1. **What's your preferred option for getting two water pipes across the Mataura River?**

Should we look at combining the water pipes with a walking and cycling bridge?

Q2. **Rank these four options for a bridge from one to four, with number one being your favourite**

1. Option D: Multi-span bridge at Rock Street
2. Option C: Multi-span bridge at Halton Street
3. Option B: Multi-span bridge at Surrey Street
4. Option A: Multi-span bridge at Maitland Street.

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

Id actually prefer Nelson Street or Rock street. It would get more foot traffic by commuters, not just fitness people. If its way up at maitland street, you'll get the fitness people, but not the commuters and kids going to school.

Q4. **Are there any further comments you would like to make about this project?**

Don't be put off by all the negative people. A bridge will add value to the town if done right and the outside funding options from Waka Kotahi are good.

2. Option C: Multi-span bridge at Halton Street
3. Option D: Multi-span bridge at Rock Street
4. Option A: Multi-span bridge at Maitland Street.

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

1. I often bike to and from work and the bridge is difficult to access on and off on a bike. 2. We are building a house at 34 Huron street and any 3 of the bridges close to town will be very convenient and will encourage more people to walk to and from town from East Gore and people in general to the tracks around the area.

Q4. **Are there any further comments you would like to make about this project?**

We will have a house directly over looking at least two of the options and we look forward to watching people enjoy the walking tracks and using it our selves, we don't believe the less imposing bridge designs will detract from the view up the river and the bridge will benefit many people.

2. Option C: Multi-span bridge at Halton Street
3. Option D: Multi-span bridge at Rock Street
4. Option A: Multi-span bridge at Maitland Street.

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

I think adding to recreational facilities is fantastic for Gore. More biking and walking opportunities. Connect East Gore another way and make it accessible. I would like to see more walking and cycling tracks alongside the river, and linking up to the new bridge would be amazing too. I know cost is sn issue but an investment in the future of our town as a desirable place so worth it.

Q4. **Are there any further comments you would like to make about this project?**

I think the negative chat around this previously is a shame as often the negative people seem to be the loudest and get heard, encouraging others to jump on the bandwagon. Keep up the good work with making Gore shine!

Q1. **What's your preferred option for getting two water pipes across the Mataura River?**

Should we focus on getting the pipeline across the river by drilling underneath it?

Q2. **Rank these four options for a bridge from one to four, with number one being your favourite**

1.

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

not answered

Q4. **Are there any further comments you would like to make about this project?**

Your wasting a huge amount of Rate Payers money every time you have these crazy idea's, spending money we don't have, are you mad, put the pipe's under the river, in unsightly, relatively low maintenance from that point in time, if you go about building a Bridge and a Flood wipe's it out, (and we are all too familiar with that happening based on the North Island right now) we are going to be left to pay for the next Bridge, you People, you have to understand, we pay your wage's, you are our Servants, we are not yours, you keep on raising our rates to fund these crazy hair-brained idea's and as a result of that we are all starting to suffer financially, now you could tell me the Pipe Line would cost more, but further down the Track it will cost less, and that is the answer here, put plan and simple, Kindest Regards

Q4. **Are there any further comments you would like to make about this project?**

The object here is to improve the quality of water. This necessitates the crossing (with pipes) of the Mataura river twice. To include the addition of cycle and pedestrian laneways to get some form of Government subsidy is foolish, it is going to increase the cost to the ratepayer for no benefit other than a "feel good factor" for some council employees and councillors. The cheapest option, both for construction and long term maintenance, is pipe only. The current bridge has walkways on either side, these can, and are, used by cyclists as are our footpaths around town. We are intending to upgrade our water quality because it supposedly falls below the best international standards. To consider catering to a possible future demand of those who want to revert to, or use, third world transportation methods just to get a funding subsidy is a fallacy. Please stop spending money on consultants, and just get on with the job at hand.

Q4. **Are there any further comments you would like to make about this project?**

Having a walking/cycling bridge is a lot safer, than having to go over the main thoroughfare. It is a shorter distance bridge over one of those areas to get into town if no transport.

Why not USE THE BRIDGE THATS ALREADY THERE???? (SH1). If another bridge was to be built think about building a bridge that can also carry traffic if the main bridge was to collapse for whatever reason not just same walk /cycle way, even if it's only a one lane bridge then at least it's another option for emergency services

Q1. **What's your preferred option for getting two water pipes across the Mataura River?**

Should we look at combining the water pipes with a walking and cycling bridge?

Q2. **Rank these four options for a bridge from one to four, with number one being your favourite**

1. Option C: Multi-span bridge at Halton Street
2. Option A: Multi-span bridge at Maitland Street.
3. Option B: Multi-span bridge at Surrey Street
4. Option D: Multi-span bridge at Rock Street

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

In a 100year timeframe, the location of such a bridge would influence commercial development at each end. Being more proximate to the majority of East Gore citizens would advantage them. For maximum resilience in every situation of river flow, every bridge should extend from stopbank to stopbank.

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

not answered

Q4. **Are there any further comments you would like to make about this project?**

I think you have probably answered the question and options yourself in that you have said that drilling under the river will be cheaper, therefore that is the option to take. This council in the past has been all to ready to spend rate payers money with reckless disregard about where the next dollars are coming from. It’s high time we started to save some money instead of spending every thing we have got.

Q1. **What's your preferred option for getting two water pipes across the Mataura River?**

Should we look at combining the water pipes with a walking and cycling bridge?

Q2. **Rank these four options for a bridge from one to four, with number one being your favourite**

1. Option A: Multi-span bridge at Maitland Street.
2. Option C: Multi-span bridge at Halton Street
3. Option B: Multi-span bridge at Surrey Street
4. Option D: Multi-span bridge at Rock Street

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

Because it is further away from the Main Gore Bridge, and it would be lovely to do the circuit of walking from one bridge over to the other. Ideally a concreted path along the river bank would be great for families out walking with little ones in prams and little bikes etc.

Q4. **Are there any further comments you would like to make about this project?**

not answered

not answered

Q4. **Are there any further comments you would like to make about this project?**

Given the ongoing cost of living increases I believe this is the time to go with the least expensive option. This needs to be considerate of ongoing maintenance costs, the likelihood of more extreme weather events, and the unlikely scenario it will come in on or under budget. Was the option of using the current bridge not feasible due to the length of pipe required?

Q1. **What's your preferred option for getting two water pipes across the Mataura River?**

Should we look at combining the water pipes with a walking and cycling bridge?

Q2. **Rank these four options for a bridge from one to four, with number one being your favourite**

1. Option C: Multi-span bridge at Halton Street
2. Option B: Multi-span bridge at Surrey Street
3. Option D: Multi-span bridge at Rock Street
4. Option A: Multi-span bridge at Maitland Street.

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

C isn't in flood plain, provides nice loop to access on a bike or to walk.

Q4. **Are there any further comments you would like to make about this project?**

Option 1 too far out, option 2 is good loop but on flood plain. Option 4 too close to original bridge. Get on with this project we need more walk and cycle ways in Gore, including the Gore to Mandeville bike way.

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

not answered

Q4. **Are there any further comments you would like to make about this project?**

Common sense would tell you that direct drilling would be the most cost effective and sensible use of other people's money to achieve getting the water pipes across to the other side of the river. This needs to be completed at the end of Maitland Street.

2. Option C: Multi-span bridge at Halton Street
3. Option B: Multi-span bridge at Surrey Street
4. Option D: Multi-span bridge at Rock Street

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

A bridge at Rock Street seems pointless as there is a main bridge there already. A bridge at maitland would encouge walking and cycling along the river but gives options to cross without having to back track. A nice loop

Q4. **Are there any further comments you would like to make about this project?**

Q1. **What's your preferred option for getting two water pipes across the Mataura River?**

Should we look at combining the water pipes with a walking and cycling bridge?

Q2. **Rank these four options for a bridge from one to four, with number one being your favourite**

1. Option D: Multi-span bridge at Rock Street
2. Option C: Multi-span bridge at Halton Street
3. Option B: Multi-span bridge at Surrey Street
4. Option A: Multi-span bridge at Maitland Street.

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

The further away from the main commercial area of Gore the less likely people are to use the bridge, particularly locals who just want to get to work or do shopping. No point in having a cycleway/walkway unless it's going to be used regularly by locals

Q4. **Are there any further comments you would like to make about this project?**

Please don't make it a "piece of art sculpture " like the previous proposal was. Gore is a rural area, not a citified area. Give us something that will fit in with the culture of the area e.g. predominantly farming

2. Option C: Multi-span bridge at Halton Street
3. Option B: Multi-span bridge at Surrey Street
4. Option D: Multi-span bridge at Rock Street

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

Shortest length and less on going cost A good distance between existing bridge to make it a reasonable circuit for walkers and bikers Funding may not be available from Waka Kotahi, is different from wont be available so a case needs to be presented that will see funding obtained, if not its a consideration but surely not the only one There doesnt seem to be a lot of sense in placing a new walking bridge besides an existing bridge that you can walk and bike across. If main bridge is taken out in an event there needs to be a bridge in different spot that may not be damaged

Q4. **Are there any further comments you would like to make about this project?**

It would be good to have the option to also rate the different designs of bridges that were shown at pop up event My preferred design was a simple concrete structure, grey. Bridge does not need over the top bells and whistles just a simple design Current address is 505 West Otago Road but we own a property at 11 Rock Street that we will be moving to in a couple of years so have a vested interest in where that bridge will be placed

Q4. **Are there any further comments you would like to make about this project?**

You have spent enough of our rate payers money! Just get the water across without more appeals etc. It has taken far too long and a decision needs to be made. Drilling is the quickest way to get it done sooner rather than later! I'm sure if you went with this option you'd hardly hear a word from rate payers - they are not going to complain about not having another bridge! Spend the money on better walk/bike tracks and repairing the ones we already have (they are terrible!

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

not answered

Q4. **Are there any further comments you would like to make about this project?**

Burying/drilling into the riverbed adds better flood resiliance. I also dont believe in chosing other options that bludge taxpayer money via waka kotahi, its poor form to undertake a town project and burden all of nz tax payers with costs for a project that wont benefit them.

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

not answered

Q4. **Are there any further comments you would like to make about this project?**

At a time when the cost of living is going up and up, the additional cost of a bridge seems unnecessary. Gore is already a great place for walks and activities we do not need an extra bridge/ walking track.

Q1.	**What's your preferred option for getting two water pipes across the Mataura River?**	Should we look at combining the water pipes with a walking and cycling bridge?
Q2.	**Rank these four options for a bridge from one to four, with number one being your favourite**	1. Option B: Multi-span bridge at Surrey Street 2. Option A: Multi-span bridge at Maitland Street. 3. Option C: Multi-span bridge at Halton Street 4. Option D: Multi-span bridge at Rock Street

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

The bridge option for B appears to provide the more strategic approach to Gore District Council's strategic considerations for infrastructure development. Future policy and regulatory requirements, could be, better aligned to the outcomes this option provides for in the assets full life cycle. In summary this option's strategic objectives are closely aligned to asset management risk related matters and best practice asset management outcomes. Additionally, option B appears to support an overall infrastructure strategy across activities addressing any number of LG and NZTA infrastructure initiatives that provide the best outcome for the community.

Q4. **Are there any further comments you would like to make about this project?**

Not sure about the "underground bore" and "another treatment plant"??. However, not having a bridge eludes to a lack of resilience in the network which would be counter intuitive, and the lifecycle asset management benefits of a bridge supporting 3 waters network resilience in perpetuity are worthy of investment solely to achieve resilience in the network. The alternative has embedded themes of high level considerations for isolated fragmented network development in capacity and not much else. You've got a good team, happy to support where ever it lands, back yourselves and kick it in the guts.

Q5.	**Name**	Rather be supportive but anonymous

4. Option A: Multi-span bridge at Maitland Street.

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

Cost

Q4. **Are there any further comments you would like to make about this project?**

I regularly walk over the current bridge and would appreciate an option without the noise and fumes of the traffic. The walkways are narrow and crossing at either end could be difficult for elderly, children or disabled people. I am concerned that the drilling option has too many unknown risks and therefore too much potential for cost to balloon.

Q4. **Are there any further comments you would like to make about this project?**

I strongly feel that drilling of the pipeline across the river is the best option. As a farm owner, upstream, I know very well the damage by a large flood can do. If another bridge is built I think that it would be put it at a greater risk, even if there are not many piles in the river and would also be exposed to the weather. The current 2 bridges don't appear to be maintained e.g. removal of debris. I believe that the flood banks at Mataura are going to be raised. It worries me that a high river flow will back up more and the obstruction of another bridge adds to the dilemma during a flood.

Q4. **Are there any further comments you would like to make about this project?**

I am appalled that the council is continuing to prioritise ‘nice to have’ rather than the pragmatic very urgent issues that beset our district. That the council is continuing to favour a further bridge option is irresponsible on several levels; economically, that the community is entitled to clean water that meets the national standard, flood protection and a robust storm water system. Surely the council does not need any further evidence of the increasing number of significant rain events. Worryingly our current storm water system can’t manage minor ‘heavy’ rain falls, and I’m not convinced our flood protection is going to be strong enough if we are subjected to on-going significant rain events.

Q4. **Are there any further comments you would like to make about this project?**

I am not a ratepayer in Gore, but do all of my personal business in Gore. The pipe should be put underground as the ratepayers do not need the extra cost of building and maintaining a bridge. It is just putting another needless cost on them. The milk factory have gone under the river so the council should be able to also. A bridge is frivilous.

Q1. **What's your preferred option for getting two water pipes across the Mataura River?**

Should we focus on getting the pipeline across the river by drilling underneath it?

Q2. **Rank these four options for a bridge from one to four, with number one being your favourite**

1.

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

not answered

Q4. **Are there any further comments you would like to make about this project?**

Lower cost. Shortest distance from treatment plant to the wells. No problem with an underground pipeline in floods whereas a cycle bridge could be compromised with the increased flooding possible in the future. As the pipework infrastructure in Gore needs further work surely funds need to be spent there and not on a cycle bridge to be used by a very small minority of Gore's population. I have no problem biking over the present Gore bridge via the pedestrian walkway. Gore doesn't have much in the way of cycle tracks to connect up between the other cycle bridge options. The tracks at Walnut Grove and along Woolwich Street have lacked maintenance in the past. If the proposed cycle bridges are the preferred choice of Gore residents does that mean the tracks would get an upgrade. Are cyclists travelling into town going to cycle a greater distance to bike over a new bridge?

not answered

Q4. **Are there any further comments you would like to make about this project?**

There is already safe pedestrian / cycle access to the town centre. Any of the bridge options will only funnel pedestrians / cyclists and school children down the heavy traffic bypass. Spending on another pedestrian cycle bridge is wasteful no matter who’s wallet is funding it.

Q4. **Are there any further comments you would like to make about this project?**

Going under the river has to be the only option. All the bridge options come with issues bridge, A= This is to far from anything. B= Any bridge here will be challenged. C= Bridge could go here but would be challenged by residents. D= what is the point, it to close to the existing bridge there is no need to have one so close. So under the river is the only option. to consider

Q1. **What's your preferred option for getting two water pipes across the Mataura River?**

Should we look at combining the water pipes with a walking and cycling bridge?

Q2. **Rank these four options for a bridge from one to four, with number one being your favourite**

1. Option B: Multi-span bridge at Surrey Street
2. Option A: Multi-span bridge at Maitland Street.
3. Option C: Multi-span bridge at Halton Street
4. Option D: Multi-span bridge at Rock Street

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

I prefer option B as it gives a good alternative for crossing the river. C & D are close to the main bridge anyway. If D was the best bridge option I'd say just go under the river because that wont make much of a difference. As above really, B doesn't affect my outlook either, like it does the houses on that side of the river. My choices are purely thinking of the best options for good walking/running/biking routes. A would be ideal other than the high cost.

Should we look at combining the water pipes with a walking and cycling bridge?

Q2. **Rank these four options for a bridge from one to four, with number one being your favourite**

1. Option D: Multi-span bridge at Rock Street
2. Option C: Multi-span bridge at Halton Street
3. Option B: Multi-span bridge at Surrey Street
4. Option A: Multi-span bridge at Maitland Street.

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

The surface on the present bridge walk and cycle option are hazardous and unsuitable for walking frames mobility scooter and walking lots of places to trip. Have always felt the section from Huron st to beyond the round a bout are really dangerous for pedestrians and cyclists and quite scary, with so much traffic and so close when crossing the bridge. D is probably best option to get the best use, easy to access to town centre and Norfolk triangle area, Irwell etc. To get to west Gore school without going via main shopping area.

Q4. **Are there any further comments you would like to make about this project?**

This Bridge is a must for Gore in my opinion and think its feasible to combine it with the water pipes which is also a priority for the benefit for citizens. In times of flooding, because it will be higher than present bridge East Gore work force have another option for getting to work.

4. Option A: Multi-span bridge at Maitland Street.

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

I have concerns with the maintenance of pathway on the flood plain. Better to have a bridge that will stand the test of time. Spend the money get the better product.

Q4. **Are there any further comments you would like to make about this project?**

I really enjoy walking along the river especially along the stop banks.I feel the river is assest to gore and is under utilized. As a walker crossing the road bridge is noisy and unpleasant. So i am keen to see a walking/cycling bridge. Also, I liked the original design of the bridge it was creative and stood out.

Q4. **Are there any further comments you would like to make about this project?**

I think you should focus on drilling the pipes under the river, and put the pipes on the riverbed and design an awesome river wave feature over it, like the Hawea Whitewater Park. It would be cheaper than building an eyesore of a bridge and could encourage surfers, swimmers and kayakers to have a world class feature, to bring people and money to Gore. Scott Shipley USA 520 designs, designed theHawes Whitewater Park, it's so fun and could really put Gore on the map.

3. Option C: Multi-span bridge at Halton Street
4. Option D: Multi-span bridge at Rock Street

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

I feel the 90m length would be more acceptable, would have less visual impact and still be close enough to the town center to be used as a pedestrian walkway.

Q4. **Are there any further comments you would like to make about this project?**

If the preferred pipe crossing were to be underground, then work needs to be carried out to improve the walking access across the existing bridge. The paving slabs are loose and uneven (tripping hazard) and I think that it would be a good move to make one side a dedicated cycle lane.

Q4. **Are there any further comments you would like to make about this project?**

Drilling under the riverbed will make the pipelines permanently safe and not run the risk of being washed out by large flood occurrences. If it goes over the predicted cost, then so be it. Water is an essential service, a cycle / walking bridge is not. We are $900k in so far, with no meaningful progress. Just get the pipes under the river and "job done". Interestingly, when I attended the Eccles St drop in session, Mr Bayliss greeted me with the line "are you here to talk about the bridge"? The cynical part of me thinks that the decision has already been made, it is only a matter of deciding which bridge option is most popular.

2. Option C: Multi-span bridge at Halton Street
3. Option A: Multi-span bridge at Maitland Street.
4. Option D: Multi-span bridge at Rock Street

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

Estimated cost and position, strong wish for a walking/cycling bridge to link East Gore people with the main township.

Q4. **Are there any further comments you would like to make about this project?**

I live in East Gore and would use the walking bridge to get to work, reducing fuel emissions by not driving. My East Gore neighbours don't let their children use the SH1 bridge for safety reasons, but would be happy to let their children use a safer walking/cycling bridge, again saving fuel emissions and allowing children more autonomy

2. Option C: Multi-span bridge at Halton Street
3. Option D: Multi-span bridge at Rock Street
4. Option A: Multi-span bridge at Maitland Street.

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

Seems the most logical, for connecting biking and walking, also most cost effective. However I am so keen for a cycling walking bridge, that I would be happy and would use it from any location

Q4. **Are there any further comments you would like to make about this project?**

Please build a cycle and walking bridge. We live in North Gore and about 3x a week I bike with my 1 year old on my bike to Hamilton park. I try to stay off the road as much as possible and choose to bike along the riverbank and then under the bridge to then bike over the walkway part of the bridge. If I'm honest I don't feel 100% safe doing this with my 1 year old. And would love a safer option that I can enjoy with my family and encourage my children to also love biking and exercise. Also to appreciate our beautiful river and feel a connection to it. It would be such an asset and attraction to Gore to have a beautiful multi purpose bridge and walking tracks that allowed families to safely enjoy our river and bike tracks, connecting east gore.

Should we focus on getting the pipeline across the river by drilling underneath it?

Q2. **Rank these four options for a bridge from one to four, with number one being your favourite**

1.

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

not answered

Q4. **Are there any further comments you would like to make about this project?**

• Is our Gore District Council currently focused on transporting water across the Mataura River as part of the Central Government Required Water Quality standards upgrade our meeting an ‘assumed’ community need? • If they are focused on the primary purpose of transporting water, why are they not focusing their energies, and our money, into the most cost effective, efficient, expedient method to transport water? • Why are the options being obviously touted have inherent additional costs for additional piping, additional construction, additional engineering, additional design and additional ongoing maintenance and repair costs? • Where is the identified existing need for a pedestrian/cycleway bridge across the Mataura? Where is the Business Plan that outlines the data obtained to identify the need for a pedestrian/cycleway bridge across the Mataura River? That need is currently an assumed need. • An identified vertical blemish on the visual environment and amenity value of a proposed site that resulted in a declining of a resource consent has now been proposed as a horizontal blemish. • How many simultaneous Capitol Infrastructure projects can we, as ratepayers, be expected to support through our rates? As a Ratepayer why was I not contacted by the contracted consultation company? Why was I not consultated on my preferred option for transporting water across the Mataura River before my Council began spending my rates money on plans and brochures that are biased towards a pedestrian cycleway bridge to transport water? The Consultation company has 'consulted' using a computer based model that does not reflect the views of the people actually affected by the project, the ratepaters. I also draw your attention to the following excerpt from IN THE ENVIRONMENT COURT AT CHRISTCHURCH I TE KŌTI TAIAO O AOTEAROA KI ŌTAUTAHI Decision No. [2022] NZEnvC 29 Outcome [144] Drawing on all of the above, it is apparent that a number of issues which have drawn attention in this hearing, also arose during the first instance hearing. These include the debates about the relevance of particular plan provisions and the question of the proposal’s consistency (or otherwise) with certain policies, as well as concerns over the adequacy of the assessment of alternatives. In the court’s view, these matters were still not resolved satisfactorily at the hearing. [145] On the specific issues of assessing alternatives – firstly, the issue of the need to do so triggered by the finding of significant adverse effects, and secondly, the shortcomings of the Council’s assessment process (excluding the visual amenity criterion and limiting assessment to a desktop exercise) – it is evident that these deficiencies have not been adequately addressed in the case presented to us. [146] While wishing to justify the proposed bridge location on the basis of community-wide benefits for active transport and recreation, the Council’s case furnished no supporting analysis and evidence of these benefits. Has the Gore District Council ensured these observations by the Judge, have been addressed? The option of trenching through the Mataura River to lay pipes for the transportation of water, appear to have been swept aside as 'not being resource consentable'. That statement is unsubstantiated. All research I conducted indicated that under the Regional Water Plan for Southland (amended in accordance with Council and Environment Court decisions)April 2010; Rule 27 - Cables, wires and pipes and Rule 47 - Bed disturbance activities not covered by, or not complying with, rules, would be a permitted activity, a restricted discretionary activity, or a discretionary activity, as it would or could meet the required conditions detailed in the Rules. No blemish to the visual environment, no intereference with the amenity value of the physical environment, and limited on going maintem=nace and repair cost. Why, in light of the unprecedented high flood levels being experienced here in New Zealand and internationally, is our District Council contemplating building an essential infrastructure amenity in a flood plain? Under it , yes but elevated over it?! Predictions are for higher more frequent food occurances and here we are faced with funding a project that will be directly affected by future such flooding events.

You guys need to stop toying with peoples money when you've had the option to get your shit sorted and tie your pipes in with Mataura Valley Milk. And didn't. Now you've cost us too much with the library and do the same with a wasted bridge. You're going to chase people away from this town when the rates in cromwell are cheaper! Cromwell is a nicer place to live, you trust the council to do the right thing with the ratepayers money AND curb side recycling hasn't been taken away from them!!

Pipeline under the river is the safest. The last big flood we had reached to the bituman on Maitland Street, at that height of water a log coming down the river in a flood could wipe your bridge out, and then where would you be?

Q1. **What's your preferred option for getting two water pipes across the Mataura River?**

Should we look at combining the water pipes with a walking and cycling bridge?

Q2. **Rank these four options for a bridge from one to four, with number one being your favourite**

1. Option A: Multi-span bridge at Maitland Street.
2. Option D: Multi-span bridge at Rock Street
3. Option B: Multi-span bridge at Surrey Street
4. Option C: Multi-span bridge at Halton Street

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

Increased connection to both edges of town, looks to the future towards to the growth of Gore, increases recreational activities, stepping stone for future network of cycle trails around Gore, reconnects more people to the river, provides more access to the river and it's uses, low ongoing maintenance costs for pipe network.

Q4. **Are there any further comments you would like to make about this project?**

Looks like Option A is the largest upfront cost, yet little to no information regarding if ongoing costs have been presented in overall total budgets for the community. Would be interesting to know what the overall 20-30 year cost estimate would be for all projects and if this effects Options A viability. Supportive of any bridge, if future growth is headed north and north east, better connection to the township and pathways needed. Just need to look at other growth towns. This should be a focus regardless of Waka Kotahi money while also promoting healthy living through active transport. I would also like to understand where the information that people are unlikely to use a bridge over Maitland street was determined, and if this is based on community engagement or any factual elements.

Q1. **What's your preferred option for getting two water pipes across the Mataura River?**

Should we look at combining the water pipes with a walking and cycling bridge?

Q2. **Rank these four options for a bridge from one to four, with number one being your favourite**

1. Option A: Multi-span bridge at Maitland Street.
2. Option B: Multi-span bridge at Surrey Street
3. Option C: Multi-span bridge at Halton Street
4. Option D: Multi-span bridge at Rock Street

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

not answered

Q4. **Are there any further comments you would like to make about this project?**

If a bridge was thought necessary Option A would be favoured. If a bridge was felt necessary Maitland St would be the least disruptive to the residential areas. I believe that pipes were put under the Mataura River to supply Mataura Valley Milk - so it has been done before. No matter what the cost now - the project will be subject to cost rises before completion.

not answered

Q4. **Are there any further comments you would like to make about this project?**

Option B provides a good walking/cycling circuit (over the existing bridge and back across the other one). It would impact fewer people visually, if that turns out to be an issue, it's the least costly and is already likely to attract funding from Waka Kotahi.

Q4. **Are there any further comments you would like to make about this project?**

Surrey St - a good option. Will be an asset to the community and toursits. Walking by the river most days, I think the junction on Huron St, would need footpaths. It is dangerous trying to cross the road from the river area.

Are you aware of the dangers on the pedestrian areas of our current bridge? One problem is the trip hazards. The start of the bridge, the metal plates and the concrete tiles, makes it hard walking aids and kids scooters. It is also a problem that you can't fit two prams going different ways past each other without a squeeze. Mobility scooters would also struggle to fit. A solution for the pipe may be an extension for the current bridge, that way there is room for a pipe and it makes it easier for prams to fit. It would also help if it was smoother. If you were to extend the bridge you could also put a pedestrian crossing at either end to help get across. Thank you for considering my idea.

Mataura River Crossing. Without a doubt, pipes directly from well to reservoir. Pipes in a trench above the coal seam which is conveniently placed just above the direct line from well to reservoir. The coal seam has been there for thousands of years and I am sure will stay there for thousands more. For my reference ... I lived in East Gore most of my life. I have witnessed many floods. Trevor Woodrow and myself had to patrol the flood bank during the 1986 flood. To witness the water to the very top of the bank. Water had to be sandbagged at the bottom of the bank behind the East Gore hall to save a collapse and release of the river at that point.To see large trees rolling down with branches whipping over 2.4 metres in the air demonstrate heights needed for clearance by bridges in times of flood. In the 1960's there was a gravel crushing operation above the coal seam. With all gravel removed above the coal seam there was a deep slow moving section of the river created. The gravel operation was moved down river to below the now Gore bridge. The first next flood arrived and brought with it gravel to fill the river bed back up to top of the coal seam height. This event naturally demonstrated to me where the pipe crossing should be placed. Jack McIntyre made the great suggestion to place the required pipes in a larger pipeto enable future additions if required.

Q4. **Are there any further comments you would like to make about this project?**

We need to figure out a way to carry water pipes across the river, either under, or over. My proprosal is a bridge which doubles over as a pedestrian bridge. But this bridge must be sutiable for all means of transport, including strollers, mobility aids, childrens kick scooters and other things. I have two options that could include, upgrading the current bridge or building a new, stronger, more durable and flood resistant bridge. To build a new bridge, we need to consider how safe it is for floods, and how much weight it can carry. There are currently two options as to how we carry pipes to the other side of the river; either a bridge to carry them across the Mataura river, or drill them under the river. The problem with the latter is that this could affect the ecosystem of the river itself, A new bridge could offer a way to take the pipes across that river, and would also offer a pedestrian crossing of the river. My opinion is that it should be a suspension bridge or truss bridge, Neither bridge has piles, so there would be no risk of it being knocked over by large objects in the river, The great thing about building a newer safer pedestrian bridge is that it replaces the current one, which could be turned into more road space in the future. This new pedestrian bridge should be paved, rather than have concrete tiles, so it is less of a trip hazard. Last week, when I was walking across the bridge with my mum and little brother, an elderly woman got her wallker stuck on the edge of the bridge where it meets the footpath, and she struggled to get it onto the bridge. A new, paved bridge would not have this problem. If we were to upgrade the current bridge, it should perhaps include extensions to the pedestrian walkways on either side, to allow for more space for pipes, and pedestrians. The current bridge does not have enough space for a stroller or mobility scooter to pass another oncoming stroller or mobility scooter, so extending it would introduce more space.This upgrade would also include paving the bridge, so it is easier to cross with kick scooters, mobility aids and strollers. This extension could prove as a good chance to use recycled materials sich as recyclable plastics, or reusable metal from previous bridges or buildings. This would double up as a tourist attraction being one of the first recycled material bridges in New Zealand. There is a bridge in Peebleshire, Scotland, made of 100% recycled plastic, strong enpough to carry a tractor. Iron and steel are also great options as they are stronger than most other materials in both compression and tension. These two options take into consideration flood safety and cost, and are both viable options. Thank you

When one takes the whole of the suggested plans into account it really seems perfectly obvious that the most efficient and cost wise approach is the way to go, as quickly as it can be done. There seems to have been too much pussy footing around by council to date, the council has been appointed by the ratepayers and this gives them permission to make the best decisions that relate to Gore District. Yes, I know that a bridge may be a nice thing to have, but when you take into account the times that we are going through currently like Cost of Living and Climate Change crisis we need to spend money very wisely and that includes Government and Councils. Added to this, it would be nice for those that desire it to have someway of crossing the river on their jaunts of recreation, however we do currently have a bridge and what actual number of the population of ratepayers use it on a regular basis in a recreational way? One more thought re the bridge is, within time the current road bridge will require to be replaced or updated in some way, would it not be a good chance at that point to make the recreational options that are now being asked for to be implemented then. Time flies and before we know it the day for such changes will be here.

The council has already wasted in excess of $1million on this project. The total council debt is approaching $60million. The water connection needs to be done by the cheapest cost effective option. Once the pipes are in the ground there are virtually zero maintenance costs for at least 50 years. A bridge is another vanity project that is not needed. What we need to remember is the pipes are the priority and that is where the priority lies. I am unaware of issues for cyclists and pedestrians using the existing bridge. I use it every day to walk, cycle or drive and it suits all purposes. If Partial funding for a bridge is declined, the ratepayers will have to foot the bill. Another consideration is the actual cost of a bridge. Council has been historically poor at estimating capital costs of major projects and a bridge would be no different. The option of a Multi span bridge connecting with Surrey St is also the most illogical. Why would you situate the ramp/embankment on a flood plain? Talk about short memories. Having witnessed many floods on this river and the damage caused, particularly in the 1970's, I struggle to comprehend why this option was even considered. Ongoing clearing of debris around the piers and rebuilding of the embankment after flooding just adds to the expense of maintaining this option. Any form of bridge with piers is franky a dumb idea. This is a great opportunity for the council to listen to the ratepayers for once and make the right decision for the town. I am yet to speak to anyone who thinks another bridge and its associated costs is a good idea. The question also needs to be asked as to why the option of adding a pipe to the existing traffic bridge has not been put forward as an option?? It would seem that a bridge has always been preferred by council, with the water pipes being the excuse for it because, the council could have also upgraded the Hilbrie Ave treatment plant and saved itself the $1million already wasted.

Q1. **What's your preferred option for getting two water pipes across the Mataura River?**

Should we focus on getting the pipeline across the river by drilling underneath it?

Q2. **Rank these four options for a bridge from one to four, with number one being your favourite**

1.

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

not answered

Q4. **Are there any further comments you would like to make about this project?**

I think this would be a one off cost and shouldn't be affected by floods

Q5. **Name**

michael hood

Q1. **What's your preferred option for getting two water pipes across the Mataura River?**

Should we look at combining the water pipes with a walking and cycling bridge?

Q2. **Rank these four options for a bridge from one to four, with number one being your favourite**

1. Option B: Multi-span bridge at Surrey Street
2. Option C: Multi-span bridge at Halton Street
3. Option D: Multi-span bridge at Rock Street
4. Option A: Multi-span bridge at Maitland Street.

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

It gets the government funding , makes the most sense for a walking bridge being able to loop around with the existing bridge. Best option for ratepayers

Q4. **Are there any further comments you would like to make about this project?**

The original cable bridge should of gone ahead

3. Option A: Multi-span bridge at Maitland Street.
4. Option D: Multi-span bridge at Rock Street

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

Good central connection between East and West.

Q4. **Are there any further comments you would like to make about this project?**

Quite keen on the Surry St option but have concerns about the flood plain and possible further objections from a small minority of ratepayers. IF WAKA KOTAHI FUNDING IS NOT AVAILABLE FOR BRIDGE OPTIONS WE MAY HAVE TO REVERT TO DRILLING IF THE COST IS CONSIDERED TO BE TOO MUCH FOR RATEPAYERS TO PAY UNDER THE CURRENT FINANCIAL CLIMATE.

Q4. **Are there any further comments you would like to make about this project?**

Keep it simple. We need water, the bridges are just monuments to someone's ego. Admittedly, I would use a cycle bridge if it is built. It seems possible to build bridges in rivers, ie at Pyramid and Beaumont. Surely trenching through a river is a cost effective option.

Q1. **What's your preferred option for getting two water pipes across the Mataura River?**

Should we look at combining the water pipes with a walking and cycling bridge?

Q2. **Rank these four options for a bridge from one to four, with number one being your favourite**

1. Option B: Multi-span bridge at Surrey Street
2. Option A: Multi-span bridge at Maitland Street.
3. Option D: Multi-span bridge at Rock Street
4. Option C: Multi-span bridge at Halton Street

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

It seems like the best combination of providing access across the river for cyclists and pedestrians , between two points that are adjacent to population centres. Presumably there would be consideration given to lighting for safety and security, especially for school children people heading home at night etc. Provision of power , or perhaps solar power(?) for lighting should be easier at this location then Maitland St. Also an in depth consultancy review of the options has ranked it the highest. The option of a bridge at Maitland St would have heightened security/safety concerns, increased lighting costs. It would possible be too far out of the way for regular use by commuters and school students on a daily basis , but may be more attractive for people out for an exercise loop trip ride or walk.

Q4. **Are there any further comments you would like to make about this project?**

The direct , under-bore option is appealing on the basis or cost savings and reduced amenity values impacts, but how secure would it be given the force of repeated floods potentially washing it out?

Q4. **Are there any further comments you would like to make about this project?**

Put the water pipes under the river bed at Maitland St, there will be no maintenance in the future. The money saved would be millions, a bridge wil be washed away. Their is already a bridge across the river with a walking track on two sides.

Just getting on with securing a reliable water supply - thats the important thing. Any industrial structure/pipeline close to the exisiting bridge is bound to be ugly and detract from its amenity on that section of the river. We had lived in East Gore 50 years and found no problem with cycling on SH1 or the River Rd, to school or into town for work. The money saved on ongoing maintenance long term - is not to be squeezed at.

In life there is a difference on what we NEED to what we would LIKE. In this case we need to get the water across/under the river! like is something we desire but are unable to justify the cost. With the cost of living spiraling out of control, we must get back to basics of what we need not what we like.(this document is very vague on actual detail.

Q1. **What's your preferred option for getting two water pipes across the Mataura River?**

Should we look at combining the water pipes with a walking and cycling bridge?

Q2. **Rank these four options for a bridge from one to four, with number one being your favourite**

1. Option A: Multi-span bridge at Maitland Street.
2. Option B: Multi-span bridge at Surrey Street
3. Option C: Multi-span bridge at Halton Street
4. Option D: Multi-span bridge at Rock Street

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

At sight (A) I would think is the best option because you are in a less water pressure zone in times of flooding than you would be in the more narrow points of B-C and D. Also with this option I believe it would be of benefit to make the bridge larger to take one lane of traffic. Having this would give Gore a back up as a crossing if there was a bridge failure with our Main St Highway bridge. For my support of this you only have to look at the Major proofing at the last flood that there was a chance the bridge may go, taking out the railways too and if that was to happen you would have to travel 30 mins either North or south to cross for the following months.

Q4. **Are there any further comments you would like to make about this project?**

I hardly ever write of these things. So I may as well write of my concerns on the Mataura River wells. I have pen in hand. I have no problem with having a cycle track bridge that that would also help with piping water. But the location is a concern. Where it seems it would be put in the direct line of the main force of the water coming down at the East Gore side. The 90 metres does not seem long when you have about 40 metre from top of the bank to rivers edge that's moving plus 50 metres of the river. Even if you have the structure back a good meterage from the west side if any tree foliage is stacked in a flood on this it could force pressure on the east side that could result in failure of the banking and if they who think this is not a problem then look at the pictures of the last flood where timber was hooked up in the steels of the in complete bridge up river. A height seems to also be a concern. If foliage builds then the water force increases in narrowing. In this zone to 400 metres north could be discharge for the bank if bridge failed in flood, damming may follow. I have given you a point of view where this bridge could cause a problem. In thinking of the plan which was in the paper, the water pipes were being run down stream to this bridge then to head back up to the top of east gore. Reasons to have a bridge up stream 1) This is a nature Track so no need to have so close to towns pathways 2) Piping could go straight across from Wells and up Maitland St to tanks. 3) Bridge structure would be set in an area with less chance of pressure where in flooding the waters back up from narrowing though town lower down. 4) With Concerns of the Mayor and others to have the main bridge closed even thou the waters were about 3 foot lower than the flood before. I believe if things had gone bad and even in the future we loss the bridge that my Grandfather worked on. It would be wise to have a back up bridge in place to support the community and its services. As if in the case of the bridge being down there would be at least a half hour plus round trip from one side of town to the other whether you went North or South. The solution could be to find a way to build a one lane bridge capable to take piping and the weight of large trucks (Fire engine) Stage one: A high bridge over the water. Stage Two: Build Road above water level Stage Three: Add Second lane.

Q1. **What's your preferred option for getting two water pipes across the Mataura River?**

Should we focus on getting the pipeline across the river by drilling underneath it?

Q2. **Rank these four options for a bridge from one to four, with number one being your favourite**

1.

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

not answered

Q4. **Are there any further comments you would like to make about this project?**

Put pipe under the river. It wasn't too difficult for the Mataura Valley Milk plant!!. Will not be affected by floods and winds. Swing Bridges a real worry in the wind.

Q1. **What's your preferred option for getting two water pipes across the Mataura River?**

Should we look at combining the water pipes with a walking and cycling bridge?

Q2. **Rank these four options for a bridge from one to four, with number one being your favourite**

1. Option A: Multi-span bridge at Maitland Street.
2. Option B: Multi-span bridge at Surrey Street
3. Option C: Multi-span bridge at Halton Street
4. Option D: Multi-span bridge at Rock Street

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

Only option is option (A) (1) We can connect the walking track in East Gore across the river to Fulton Hogan entrance. Continue a walking track along the top of the west 4 1/2 Km flood bank back to the Gore Bridge. Give you a great walking/cycle track that connects to Hokonui pioneer park & the walkway out past the golf course. (2) A straight line path for water must be less likely for long term maintenance & cost of construction.

Q4. **Are there any further comments you would like to make about this project?**

As an example of a walkway. Look at South Invercargill wetland walkway. Amazing. an always popular & something we haven't got close to Gore.

Q5. **Name**

Peter Moir

1.

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

not answered

Q4. **Are there any further comments you would like to make about this project?**

Cheapest solution- Gore doesn't need anymore cycle tracks, and bridges will only shorten the distances by 1/2 /km. Bridges will be prone to flood damage, where as pipeline underground will only to earthquakes! Why build bridges to walk to a predominately industrial area.

3. Option A: Multi-span bridge at Maitland Street.
4. Option D: Multi-span bridge at Rock Street

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

I fell a walking/ cycling bridge located into the centre of East Gore and attached to a service centre of out CBD would attract the most traffic for natural purposes. This includes cycling to school, a good size walking loop, the opportunity to create a small business, café, craft beer etc around Richmond Street. Music and other entertainment around the river bank, bridge to bridge raft race + the likes. Make it a feature fun activities, build a children's park, exercise circuit, there endless ideas.

3. Option A: Multi-span bridge at Maitland Street.
4. Option B: Multi-span bridge at Surrey Street

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

Close to town. Avoids crossing the main bridge which is not good to enter or exit with children and has an uneven surface to walk on so bridge at rock st is close enough to use. It isn't built into the flood prone area.

Q4. **Are there any further comments you would like to make about this project?**

Just make a decision that doesn't incur additional costs ie people going to court to have decisions overturned.

Q1. **What's your preferred option for getting two water pipes across the Mataura River?**

Should we look at combining the water pipes with a walking and cycling bridge?

Q2. **Rank these four options for a bridge from one to four, with number one being your favourite**

1. Option D: Multi-span bridge at Rock Street
2. Option C: Multi-span bridge at Halton Street
3. Option B: Multi-span bridge at Surrey Street
4. Option A: Multi-span bridge at Maitland Street.

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

I often walk or bike over the current bridge but sometimes I find it narrow if other people are using it to. Also the road is very busy and can be hard to cross it. I feel if there was to be a second bridge built having it close to the current one is best as its close to the town centre. This would encourage people to use it more. Also having it flood bank to flood bank means less maintenance on pathway used by other options.

Q4. **Are there any further comments you would like to make about this project?**

Would be a shame to build another foot bridge and people don't use it. So drilling under the river would also be good as its protected by floods. With other flood events up north I wonder how long a new bridge would last.

Stop wasting time and money and get this done. Why wasn't it done when Mataura Valley Milk put a line through? I understand it was possible at the time to have put it in. Also just a question? Has a bridge already been sourced? Or ordered? Or is there on somewhere in Douthland waiting to be installed, as rumors say?

Q4. **Are there any further comments you would like to make about this project?**

All this bridge thing to me is just bullsh*t and a great waste of ratepayers money. Why pump water across the river and back again when we have plenty on the west side of the river? Wouldn't it make more sense to build a new treatment plant on this the west side of the river, given the population of Gore is increasing. Look ahead and build for the future I say. Also, this bridge thing is not the answer to foot and mobility traffic back and forward across the river.

Q1. **What's your preferred option for getting two water pipes across the Mataura River?**

Should we look at combining the water pipes with a walking and cycling bridge?

Q2. **Rank these four options for a bridge from one to four, with number one being your favourite**

1. Option C: Multi-span bridge at Halton Street
2. Option D: Multi-span bridge at Rock Street
3. Option B: Multi-span bridge at Surrey Street
4. Option A: Multi-span bridge at Maitland Street.

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

A multi span bridge at Halton St, would be a great asset to Gore, s we could incorporate a cycle and walking track around the area which would be a great asset to Gore in the future.

Q4. **Are there any further comments you would like to make about this project?**

Q4. **Are there any further comments you would like to make about this project?**

I don't like the bridge options, they will be a massive eyesore forever. When I was on the council 4 years ago the bridge idea was promoted. The logic of one treatment plant East Gore made good sense. I suggested at one meeting "When the river is very low get 2 big diggers (Between the coal seams) and bury the one (or 2), water pipes in the river bed." I got criticized for the idea. It was explained that a tunnel would be very expensive because contractors would not give a quote, given the Mataura Valley experience. I accept that fish and game would object, however a temporary disruption to the river bed is nothing and the fish would love it. There must be a suitable product available that could contain the 2 water pipes. concrete abutments on the riverbanks would be expensive but there forever. I must say that the staff seem to have a fixation on a bridge solution, rather than explore all options. Even a tunnel might be viable with todays technology. Think outside the square for a while, inviting public input is a good start. Sincerely Graham sharp- Ex Councillor

Q4. **Are there any further comments you would like to make about this project?**

Extra costs required for access to the bridge across flood plain and tracks to link into CBD are not known, and will require repairs when ever the river floods. Not a safe alternative crossing due to the risk of the river flooding.

1. Option B: Multi-span bridge at Surrey Street
2. Option C: Multi-span bridge at Halton Street
3. Option D: Multi-span bridge at Rock Street
4. Option A: Multi-span bridge at Maitland Street.

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

Good spot for a bridge (not too close to the old bridge and still close enough to town). Nice walking route that I will happily use.

Q4. **Are there any further comments you would like to make about this project?**

Since the costs are going to be similar to get the water across with or without the bridge, would prefer to spend a little more and have a functional bridge/town asset out of the process. The other bridge options too close to the existing road bridge will not be as aesthetically pleasing, the bridge further away will not be cost effective and I imagine also wouldn't get as much use as the ones closer to town.

3. Option A: Multi-span bridge at Maitland Street.
4. Option D: Multi-span bridge at Rock Street

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

Good central location for a bridge and seems to be the most cost effective option.

Q4. **Are there any further comments you would like to make about this project?**

A Bridge at Rock street seems too close to the existing traffic bridge, which already has pedestrian crossing which is currently used. Drilling under the river has far larger potential for cost increases as there is a lot more variables and unknowns in my opinion.

'We want to Hear from You" LETS TALK 1. Introduction. This report is not ntended to be EXHAUSTIVE but, to be used as an imput to the decision making process for considering the next steps. EXHAUSTIVE (ie including or considering all elements or aspects - fully comprehensive) Not included in this report: a) No documentation on current existing pedestrian/cycling from West to East Gore & vice versa The current % of the total population of Gore who use the footpath on the existing bridge - no projection of what the foot/cycle traffic may be in the future. b) No consultation with ratepayers or elected councillors on their cultural, social, economic views being part of this hgigh level review of the 13 options suggested by BECA. c) No consultation or imput from the above on the value scores or factor chart which is the basis of this high level review under Multicriteria Options Analysis. The issues I hav with this Next Steps paper is of the 13 options under the weighted scores paper. The term multi-span is mentioned 8 times, single span 3 times, under bore 1 time, trench pipe 1 time. THE GOAL OF THIS PROJECT IS TO PROVIDE SAFE AND RELIABLE DRINKING WATER TO THE RESIDENTS OF WEST GORE. We fail to understand why a multi-span bridge is essential in delivering safe water to Gore residents. If the muilt-span bridge is not essential (and no guarantee of partial funding) why is this option mentioned 8 times out of 13? What motivated BECA to spend time researching these options? This report summarises strategic level - and unverified information regarding each identified option. UNVERIFIED INFORMATION (ie not having been confirmed, substantiated or proven to be true Executive Summary (BECA) Table 1: Top three scoring options Milti-span bridge at Surrey Street - Total score 65 Underbore - no bridge - Total score 58 Multi-span bridge at Halton Street - Total score 49.5 These numerical value scores are a result of colaboration between BECA and Hokonui Runaga. Twelve months after the Environmental Court ruled against the GDC BECA in their executive summary have as their number one option the multi-span at Surrey Street. We believe this is a nonsense and reflects poorly on BECA and the GDC - as to implement this option would require further legal action and confrontation with ratepayers around Surrey Street. This option should not be on the table as Option 2 - Underbore/no bridge - fulfils the objective of safe drinking residents to West Gore. The relatively high scoring 58 reflects the positive aspects associated with avoiding impacts to the river and also providing the most carbon efficient pipeline at lower costs overall (BECA). OUR VIEW: Our first and only option is the Underbore at Maitland Street. The most direct, practical and efficient way to solve the water issue. QUESTIONS: 1. Is there any information on the present foot/cycle traffic crossing the existing bridge? 2. Will the results of the current Options Paper be published? 3. A copy of the letter of engagement from GDC to BECA Consultancy. 4. The cost to GDC and ratepapers of BECA's report. 5. Has GDC approached any entity in regards costing of multi-span bridges over the Mataura River? Thank you for the opportunity to express our view and ask questions. We look forward to your early reply. Allan and Noreen Thomas, 12 Waverly Street, Gore. 0274336646

1. Option A: Multi-span bridge at Maitland Street.
2. Option B: Multi-span bridge at Surrey Street
3. Option C: Multi-span bridge at Halton Street
4. Option D: Multi-span bridge at Rock Street

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

Because It is the shortest route from East Gore Treatment plant to Jacobstown Wells.It is an alternative to crossing the river for walkers and cyclists well away from heavy traffic making it a more pleasant experience. It may not encourage more people to walk to school or work but I am sure that if people wanted to do this they would use the existing bridge.

2. Option A: Multi-span bridge at Maitland Street.
3. Option C: Multi-span bridge at Halton Street
4. Option D: Multi-span bridge at Rock Street

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

Shortest bridge length. High likelihood of attracting funding from Waka Kotahi. Good location for walking/cycling track for residents on both sides of river. opportunity to enhance the river banks with native planting. Good bang for residents bucks! Just make a decision as no matter what, you won't please everyone. !

3. Option B: Multi-span bridge at Surrey Street
4. Option A: Multi-span bridge at Maitland Street.

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

To me this gives the best option to not only get the water across the river but enhance the safe accessibility between East and West Gore. As at the moment getting across the existing bridge whether walking or biking is a relief to get across safely, or without a near miss.

Q4. **Are there any further comments you would like to make about this project?**

I would be in favour of any of the bridge options. As long as the access on and off the bridge and to the linking streets is safe and easy options. I believe having a multi use bridge that is partially funded by Waka Kotahi is essential.

Q2. **Rank these four options for a bridge from one to four, with number one being your favourite**

1. Option A: Multi-span bridge at Maitland Street.
2. Option B: Multi-span bridge at Surrey Street
3. Option C: Multi-span bridge at Halton Street
4. Option D: Multi-span bridge at Rock Street

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

I'm suprised Waka Kotahi doesnt think it would encourage people.. I've spoken to numerous people who would definitely ise it.. I would walk/cycle that loop across the main road bridge along the river and across the Maitland Street bridge. It's away from traffic and would be great for people's well-being. I think they should reconsider funding that.

Q4. **Are there any further comments you would like to make about this project?**

Waka Kotahi should reconsider the reasons why they are not going to help with funding for option A - not only does it seem to be the most logical/practical option (shortest distance re pipe length and short bridge length and less ongoing maintenance costs) but they are assuming it wont attract more walkers/cyclists..however I could almost guarantee it will.. and if they are funding all three other options.. why not this one??

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

not answered

Q4. **Are there any further comments you would like to make about this project?**

Overall, the pipeline is the cheapest option and I believe can be completed in a shorter time than the bridge alternative. This drilling option will not impact on the flow way of the river and any future mitigation of the flooding risk to Gore. The bridge option has been pushed because the cost can be covered in part by Waka Kotahi a backhanded form of blackmail. However there are other funding support options that can be accessed for the drilling option which lead to a lower overall cost.

3. Option B: Multi-span bridge at Surrey Street
4. Option A: Multi-span bridge at Maitland Street.

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

Maitland unlikely to attract walkers. Surrey too far from town for walkers to school and work. Rock too close to existing bridge. Halton great for me personally as I am a walker and daily do the river walk as I reside in East Gore. On a whole I'm not fussy where the bridge goes as long as we get one! I can't wait! The river is my favourite place but I don't like walking over the existing bridge. It is in serious need of water blasting and cleaning up.

Q4. **Are there any further comments you would like to make about this project?**

East Gore needs this bridge! I'd love to cycle but anyone cycling over the existing traffic bridge is on a death wish!

You would expect the Gore Council, staff and councilors to have got the message from the previous bridge fiasco but it appears not. At present we are experiencing a cost of living crisis. Even the Government has taken note and changed a number of policies to relieve the pressure on taxpayers. Unbelievably our council is still pushing ahead with yet another bridge plan that will cost the ratepayers a massive amount to add to our already large debt. After the 4.5 million overspend last year we don't need more of the same. Just get the water by pipe under the the river on the shortest route which is at Maitland Street. if the Mataura Valley milk have managed to drill under the river then it should be possible for the council to do the same. Have Mataura Valley Milk been asked what their cost was? If so why aren't we being told and if not, why not. It would help the public to make a good decision if we were told the facts. After the floods in the North Island and the devastation that has been caused to bridges and other infrastructure, it is very good reason for not building any unnecessary structures over the river. We may not have the slash problem that the East Coast has but NIWA are warning us that floods are going to get bigger and more frequent. There have been a number of floods in the past that have seen large amounts of wood, including whole trees, coming through and pilin up on both the road and rail bridges, a lesson that should be learnt. The flood 2020 just flowed under the road bridge and came close to taking out the rail bridge. As these floods get bigger do we want another bridge that could potentially cause major problems. There is also the question of the visual impact. We deal with many overseas tourists who are all in awe of the uncluttered views around the district, especially of the river. Most were appalled when told of the original plans and won't be impressed with sites at options B,C and D. Ther are large numbers of visiting fisherman who walk from their motels to fish the area above the current bridge who will not want to see a bridge placed at any of those sites. We are so lucky to have such a beautiful river flowing through town with virtually unimpeded views. lets not spoil that view. It seems that a bridge of some sort is a done deal no matter what the rate payers say. In the Otago Daily Times dated April 28, 2022, CEO Parry quoted" The intention is to have a public engagement process so that the public can really give us some views on what they think. Each option would still involve a bridge, although the cable stay design was no longer on the table. We don't see much merit in trying to flog a dead horse" After reading that " each option will STILL INVOLVE A BRIDGE" you would wonder why bother with the public putting in their views. In conclusion we are totally opposed to a bridge in any form and support drilling as the only option. The reasons for this are cost, it is the most practical in climatic events, and visual impact. Diane and Barry Perkins 86a Wentworth Street Gore.

IP Address: 121.75.231.55

Q1. **What's your preferred option for getting two water pipes across the Mataura River?**

Should we look at combining the water pipes with a walking and cycling bridge?

Q2. **Rank these four options for a bridge from one to four, with number one being your favourite**

1. Option C: Multi-span bridge at Halton Street
2. Option D: Multi-span bridge at Rock Street
3. Option B: Multi-span bridge at Surrey Street
4. Option A: Multi-span bridge at Maitland Street.

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

Site C allows for easy access for the East Gore residents to make their way to the east side of the bridge; Halton Street also connects directly to Railway Esplanade/SH1 and creates a subsequent flow from other local recreational amenities, such as Hamilton Park and East Gore School, through to the bridge and into the other side of Gore – CBD, Bannerman Park and the wider town belt. Especially when the new pedestrian crossing over the SH1 is in place, allowing for easy and safe movement to and from East Gore. The Site C connectivity point on the town side is close to other local recreational amenities such as the bike park, Eastern Southland Basketball, the Trout and public toilets. Also the Maruawai precinct and heritage areas. Site C allows for more pathways along the stop bank on the town side of the bridge to enable easy access to said pathway to make active transport and recreational opportunities easier and accommodating of multi modes i.e. bike, prams, wheelchairs, scooters, mobility scooters etc. Allows for all ages/intergenerational to enjoy the opportunities afforded to them. The central location of Site C along River Terrace, assuming infrastructure is in place to allow people to access River Terrace from the end of the bridge, means that users can be encouraged to enjoy the riverside recreational options. Site C is stop bank to stop bank, to avoid any infrastructure being down in the flood plains reducing likelihood of being damaged in a flood event.

Q4. **Are there any further comments you would like to make about this project?**

Active Southland exists to help our people be more active, resulting in the betterment of overall health and wellbeing for individuals and the wider community. Allowing for a bridge and associated pathways as part of this project will help support this goal for the people of Gore. Alongside the bridge itself, to allow for recreational and active transportation to move safely off the ends of the bridge and into surrounding road networks, care will need to be taken in the planning of pathways and crossings in busier traffic areas i.e. crossings in and around the Gore Triangle roundabout area, and any access off the stop bank and into the industrial areas along Richmond Street. Consideration of the gradient of bridge and nearby paths will be important to allow greater use by those with mobility barriers. Planning for further connectivity options from the immediate pathways off the bridge will make a difference in encouraging people to explore further, such suggested options could be – upgrading and adding to the pathways that would move people from bridge on the eastern side to the Walnut Grove area, and along the stop banks on River Street and improvements to the recreational areas and pathways next to the river in this same stretch. Good footpath/walkway and associated infrastructure will help people to be safe when recreating in this area, helping to decrease falls. The addition of any additional infrastructure, such as seating, will make the experience more agreeable to community members of all ages and abilities.

Q1. **What's your preferred option for getting two water pipes across the Mataura River?**

Should we look at combining the water pipes with a walking and cycling bridge?

Q2. **Rank these four options for a bridge from one to four, with number one being your favourite**

1. Option A: Multi-span bridge at Maitland Street.
2. Option C: Multi-span bridge at Halton Street
3. Option B: Multi-span bridge at Surrey Street
4. Option D: Multi-span bridge at Rock Street

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

It will be less on-going maintenance, does it have better performance pressure wise too? the on-going cost will be less. Bikers - walkers may be very happy to use it.

Q4. **Are there any further comments you would like to make about this project?**

I believe the other 3 options will atrract legal problems from the very few people who feel they are entitled to dictate to the many who will benefit from the extra infra structure security. The cost off this legal action would by far exceed the extra cost of plan A.

4th April 2023 Final submission to the Gore District Council on the Bridge or River crossing. THE SIMPLE SOLUTION Attached is the most simple solution, including a total completed estimate for the piped river crossing either by Trenching or Tunnelling at Three and a half Million dollars, including the resale of the Council prone land. The safety of pedestrians and cyclists crossing the bridge is the responsibility of the Central Government and that solution is totally up to them. In other words NO CYCLE BRIDGE with all its cost to our ratepayers. sincerely Ernest MacManus Bridge or river pipe Crossing? The simple solution. NO. To a Halton Street or any Cycle bridge that interferes with the spectacular Rural and Mountain Views of any of the ratepayers concerned. YES For the Water Mains River crossing at or adjacent to Maitland Street, from test drilling on both sides of the river that determined the depth of the bed. Tenders can be called to either TRENCH OR TUNNELL the pipes under the river. Tenderer's to provide their own specification including restoration of the river bed. NO To any Cycle Bridge for recreational cyclists at ratepayers expense. The approaches and cycle tracks are not included in estimates and will almost double the total cost at ratepayers expense. YES Approach Central Govt. Stressing the Safety of cyclists and pedestrians crossing No.1 highway bridge at Gore. In accordance with Government policy "On safety of cyclists" it is their responsibility to provide a safe cycle way. Either clip on, or a cable bridge, including safe approaches at no cost to our rate payers. YES To the resale of the needlessly purchased rural flood prone land by G.D.C. When under the public Works Act access was free. signed on behalf of the East Gore objectors and GDC ratepayers Ernest MacManus 4th April 2023

Leave your stupid idea of building an expensive bridge in the middle of a flood plain for no real reason other than to impede the flow of water when the river goes into flood mode and thereby putting the structure at risk along with the two or three waterpipes it was built to carry above the normal flow of the river .. To entertain building such a bridge does nothing more than add risk to what should be an essential service. Put the pipes under the river Goodness, they will be underground before and after..Why ever would you want to pop it in the middle of a flood plain, is beyond me !. Do it once and do it right. Do not play with nature thinking a bridge will be the better option .. Quite clearly it is not.

2. Option C: Multi-span bridge at Halton Street
3. Option D: Multi-span bridge at Rock Street
4. Option A: Multi-span bridge at Maitland Street.

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

It's already in motion and in that respect more of a known quantity, guaranteed co-funding and provides good lifestyle options (recreation and daily commute) for residents and an additional activity for visitors. It would create a pleasant loop track along the river and looking wider, create a circuit that could take in the nearby parks - Hamilton, Bannerman and the central gardens. The distance from the vehicle bridge also means there would be less road noise while crossing (that is one of the most unpleasant things about crossing by foot or bike at the moment aside from safety) and the view up river from there is beautiful. People visiting Gore's revamped central attractions and Art Gallery can go for a wander along the river as part of their trip. There is no worry with having to negotiate the heavy truck bypass and any associated costs. It is more likely to be used by visitors and residents and creates opportunity along River Terrace for events and ice cream trucks etc. to park up on a nice day, or even further development along the river - restaurants etc. This assumes there is as much thought given to the western connection of the bridge to town - that there is a suitable route avoiding the industrial area and that it is pleasant as an overall experience with landscaping etc.

Q4. **Are there any further comments you would like to make about this project?**

A walkway past the East Gore Church to Rock Street Bridge would create connection between it and the Gallery / Moonshine Museum etc. but it would be close to the road bridge and still noisy. It also has the look of 'what's the point?' when the existing bridge is so close. Consideration / $ would also be needed for an underpass for cyclists and walkers to negotiate the heavy truck bypass.

Q1. **What's your preferred option for getting two water pipes across the Mataura River?**

Should we look at combining the water pipes with a walking and cycling bridge?

Q2. **Rank these four options for a bridge from one to four, with number one being your favourite**

1. Option B: Multi-span bridge at Surrey Street
2. Option D: Multi-span bridge at Rock Street
3. Option C: Multi-span bridge at Halton Street
4. Option A: Multi-span bridge at Maitland Street.

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

I prefer B only if it's only getting the pipelines across. The economic conditions of our council and of our country is not good. The cost will come from the rate payer. Council cannot assume anything today. Does the council or community want or need another bridge for cyclists and pedestrians?, at present it has the means. It needs a pipeline across the river. I would like to see a costing of taking the pipeline above the river.

Q4. **Are there any further comments you would like to make about this project?**

Thank you for this opportunity to respond to this project. I have filled in Lets Talk but this will include more of response. The council must take into their decision the state of the N.Z economy at this time as well as the financial position of the majority of rate payers who believe are finding their standard of living hard to maintain as most are at the end of the line and have no way of meeting the increasing demands on their income at the moment. The council decision must ask if options are wanted or what ones are needed. We have a cycle/pedestrian pathway, but we do not have a crossing for the water which is most essential. I would like the council to look at the option of building above the river a pipe crossing. This has several merits to me.1: It would not need a pylon so causing another restrictions in the river. If two pipes were added, then repairs etc, can be easily done. 2: There is no need for approaches up to the bridge, again another considerable restriction to the river flow during floods. 3: If when the time is right and all our loans are reduced changes can be made a little cost. There are several more reason why I think this is possible and more viable. I would like more public discussion and costing on this proposal. Finally I believe this Government encourages council to partake in council plans by offering them a funding so as councils get themselves deeper in debt and eventually be taken over by an amalgamation leaving the Gore Rate payers little say in their community. There is such a pipe line along Arrow River and it has been delivering water for years. There are many more reasons for the above the river crossing but I am definitely against another pedestrian/cyclist crossing being built at this stage. I look forward to a reply. John Barnett.

not answered

Q4. **Are there any further comments you would like to make about this project?**

Our preferred option is to keep the pipe underground not only across the river but also across the floor plain. We believe that if an underground/riverbed trench or extra large submerged pipe was installed, it would not only be able to carry the current piping capacity but would also be capable of carrying additional pipes and services across the river as well in the future allowing future proofing for the growth of Gore District. By installing the pipes in an encased space in the riverbed and underground across the flood plain, it would prevent damage to the precious pipes during flood events meaning no interruption to the water supply services to the Gore District either during such times. The only hold up to an immediate start would be necessary piece of paper - The consent. When all said and done what you are anting is to future proof an essential service - Water supply, not to provide an Amenity. The Cost would be considerably less than any of the options provided in your current line-up. The Surrey Street Plan is the only other logical choice of the Hobson's you have presented us with, providing the bridge is built high enough above the flood banks to future proof it and fitted with securely lockable grates at either end to prevent idiot (not that there are any in Gore of course!) from trying to bike and walk over it during floods events.

The first priority is to get the pipeline across the river, Council appears fixated on the safety of pedestrians, cyclists using the current footpath across the river, what is the issue?I cannot recall a accident by pedestrians or cyclists using the existing footpath to cross the river. A bridge at Maitland Street could allow a decent walking track, something that is sadly lacking in Gore currently.

Q4. **Are there any further comments you would like to make about this project?**

The option to drill under the river to get the pipeline across the river is the best option as it will have the least impact on the environment while being affordable and practical. If a bridge was required (even at a later stage and/or separately from this project) then option C or D will be the best option as they will be least likely to be impacted by flooding while being the most practical for cyclists and pedestrians. Ultimately, the design proposals of the bridges play an important part in the decision around what bridge option to pursue (i.e., design preference for older or disabled pedestrians). Therefore, I feel that it is inappropriate that the design element has been left out of this survey. I also feel that the council's knowledge about the community's need for a bridge is lacking and needs to be researched further before going ahead.

Q1. **What's your preferred option for getting two water pipes across the Mataura River?**

Should we look at combining the water pipes with a walking and cycling bridge?

Q2. **Rank these four options for a bridge from one to four, with number one being your favourite**

1. Option C: Multi-span bridge at Halton Street
2. Option B: Multi-span bridge at Surrey Street
3. Option D: Multi-span bridge at Rock Street
4. Option A: Multi-span bridge at Maitland Street.

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

No property underneath

Q4. **Are there any further comments you would like to make about this project?**

Instead of bridge at 4 just drill underneath, as to far out of town.

Q1. **What's your preferred option for getting two water pipes across the Mataura River?**

Should we look at combining the water pipes with a walking and cycling bridge?

Q2. **Rank these four options for a bridge from one to four, with number one being your favourite**

1. Option D: Multi-span bridge at Rock Street
2. Option C: Multi-span bridge at Halton Street
3. Option B: Multi-span bridge at Surrey Street
4. Option A: Multi-span bridge at Maitland Street.

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

While we were required to choose either bridge or no bridge for the feedback in regard to the Mataura River crossing, we support either option as they both support the improvement of water quality within Gore District. It is important that Gore District Council proceed with the development of this pipeline so that the quality of water will meet the New Zealand Drinking Water Standards. With careful consideration we have decided that our preferred option would be the Multi-span bridge at Rock Street (Option D). We have concluded that the benefits in the quality of water paired with the benefits of active transport will meet the four wellbeing indicators for the council (these are cultural, social, economic and environmental). Active transport is valuable as it can contribute to the health and wellbeing of an individual and a society. This includes economic prosperity, environment sustainability, healthy and safe people, and accessibility (as promoted on the Waka Kotahi website). Option D is the preferred bridge option because we believe it would improve the accessibility of pedestrians and cyclists from the East side of Gore to the West as it connects the urban centres. The Rock Street bridge does not have a pedestrian pathway in the flood plain unlike some of the other bridge options. We also found that Option A: Multi-span Bridge at Maitland Street was not reasonable as it seemed to be in a more remote area that was not necessarily suitable for pedestrians. To summarise we believe that the ‘Multi-span Bridge at Rock Street (Option D)’ would be beneficial for Gore District as it would not only improve the quality of water but also have the added benefit in providing sufficient, safe, and accessible pathways for residents living in Gore.

Q4. **Are there any further comments you would like to make about this project?**

If you are interested in discussing the proposed options further, we would be happy to support you further understand the potential health impacts of this activity.

Q1. **What's your preferred option for getting two water pipes across the Mataura River?**

Should we look at combining the water pipes with a walking and cycling bridge?

Q2. **Rank these four options for a bridge from one to four, with number one being your favourite**

1. Option D: Multi-span bridge at Rock Street
2. Option C: Multi-span bridge at Halton Street
3. Option B: Multi-span bridge at Surrey Street
4. Option A: Multi-span bridge at Maitland Street.

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

It is closer to the centre of the business area and would better serve cyclists/pedestrians when moving back and forth across the river. Rail, road and cycle/pedestrian bridges more evenly spaced may be a consideration with this option. Waste of time having the west bridge approach on a flood plain inhibiting its use in times of flooding.

Q4. **Are there any further comments you would like to make about this project?**

Water has to be moved via piping across the river, so lets future proof our town and create a greater and safer asset at the same time. It will never get any cheaper to achieve this.

Or build a separate treatment plant in east gore. You need to focus on saving money. As a ratepayer I'm sick of endless money being spent on pet projects. You can't just keep borrowing into oblivion. Your day of reckoning will eventually arrive. Get back to basics. There is nothing wrong with walking across the main bridge.

Q1. **What's your preferred option for getting two water pipes across the Mataura River?**

Should we look at combining the water pipes with a walking and cycling bridge?

Q2. **Rank these four options for a bridge from one to four, with number one being your favourite**

1. Option B: Multi-span bridge at Surrey Street
2. Option C: Multi-span bridge at Halton Street
3. Option D: Multi-span bridge at Rock Street
4. Option A: Multi-span bridge at Maitland Street.

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

Further from road bridge but not too far. Makes for a good walking circuit.

Q4. **Are there any further comments you would like to make about this project?**

A boardwalk track on top of the Gore side stop bank would make this option even better.

Q5. **Name** Graham Craig

1.

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

not answered

Q4. **Are there any further comments you would like to make about this project?**

Drilling the pipeline underneath the river is much more cost effective, will be completed more quickly than a bridge, and an under-river pipeline drilling has already been accomplished recently for the Mataura milk plant. It is unlikely a walking and cycling bridge will get much use and the current bridge seems to be working for bicycle and pedestrian traffic.

not answered

Q4. **Are there any further comments you would like to make about this project?**

Drilling under the river long term is still the cheapest option with no ongoing maintenance. $3.6 - $4.1 million seems excessive for drilling the two holes only compared to the original estimate. Its a lot less challenging and lot shorter distance to drill than the Mataura Valley drill holes Hadlee & Brunton drilled. I am sure they will know what to expect after their last successful job here.

Should we look at combining the water pipes with a walking and cycling bridge?

Q2. **Rank these four options for a bridge from one to four, with number one being your favourite**

1. Option C: Multi-span bridge at Halton Street
2. Option B: Multi-span bridge at Surrey Street
3. Option D: Multi-span bridge at Rock Street
4. Option A: Multi-span bridge at Maitland Street.

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

It connects two recreational areas while being not so close to the road bridge

Q4. **Are there any further comments you would like to make about this project?**

It would be great to see a future opportunity to develop further biking and walking tracks that help to connect communities on both sides of the river. This gives the opportunity to do that as the current road bridge for pedestrians does not provide an environment for recreational use. A bridge purpose built for recreational purposes would be a great asset to the health and wellbeing of our communities.

Q1. **What's your preferred option for getting two water pipes across the Mataura River?**

Should we look at combining the water pipes with a walking and cycling bridge?

Q2. **Rank these four options for a bridge from one to four, with number one being your favourite**

1. Option C: Multi-span bridge at Halton Street
2. Option D: Multi-span bridge at Rock Street
3. Option B: Multi-span bridge at Surrey Street
4. Option A: Multi-span bridge at Maitland Street.

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

If there was a walking bridge at Halton street I feel as though it would make a good exercise loop to go round to the current bridge. It would also be better than other options as it's not in the flood zone, but still a nice distance away from the current bridge.

Q4. **Are there any further comments you would like to make about this project?**

Why waste rate payers money on somthing we pretty much have, people ride bikes across our bride footpath anyway, if it's a problem to have both footpaths open to both, make one for walking and one for cycling. Stop waisting local money on things we don't need! Like stupid road layouts to make driving around our town horrible

The closer to town the better. Feel there would be more use and more advantages for the future being closer to the town centre. Hopefully the design can bring a nice modern piece of architecture that helps modernise and future proof Gore, as has the new Community Centre and Council Building. Shame the original design did not go through, really had the wow factor, Good luck!

Mataura River Crossing Project Feed Back Q 1 B. Just focus on getting the pipeline across the river Q 2 I am definitely against any type of bridge Q 3 Why I prefer choice B and any other comments The small town of Gore does not warrant another bridge. The appalling management of the districts' resources over the past 20 years has been a disaster for rate payers with already excessive debt levels forecast to be $54M in 2030. GDC has wasted far too much time and unnecessary costs on its grandiose schemes. It is clear that GDC managers on their high salaries (10 earn over $100K with the CEO on $300K) have very little hands on experience. Economics is meaningless in the Gore District Council Management team and unfortunately too many councillors over the years fit in that category. Sally McIntyre 1 Wallis Lane Gore

Bridge doesn't enhance amenity value - existing bridge gives access to river and East Gore. Increased danger to school children directed into heavy traffic bypass. Create isolated concretion point with limited road access making policing harder eg. night time drug dealing and evading/fleeing police. Explore trenching fully at Maitland Street or drill (Bridge exposes pipeline to destruction).

3. Option B: Multi-span bridge at Surrey Street
4. Option A: Multi-span bridge at Maitland Street.

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

While we were required to choose either bridge or no bridge for the feedback in regard to the Mataura River crossing, we support either option as they both support the improvement of water quality within Gore District. It is important that Gore District Council proceed with the development of this pipeline so that the quality of water will meet the New Zealand Drinking Water Standards. With careful consideration we have decided that our preferred option would be the Multi-span bridge at Rock Street (Option D). We have concluded that the benefits in the quality of water paired with the benefits of active transport will meet the four wellbeing indicators for the council (these are cultural, social, economic and environmental). Active transport is valuable as it can contribute to the health and wellbeing of an individual and a society. This includes economic prosperity, environment sustainability, healthy and safe people, and accessibility (as promoted on the Waka Kotahi website). Option D is the preferred bridge option because we believe it would improve the accessibility of pedestrians and cyclists from the East side of Gore to the West as it connects the urban centres. The Rock Street bridge does not have a pedestrian pathway in the flood plain unlike some of the other bridge options. We also found that Option A: Multi-span Bridge at Maitland Street was not reasonable as it seemed to be in a more remote area that was not necessarily suitable for pedestrians. To summarise we believe that the ‘Multi-span Bridge at Rock Street (Option D)’ would be beneficial for Gore District as it would not only improve the quality of water but also have the added benefit in providing sufficient, safe, and accessible pathways for residents living in Gore.

Q4. **Are there any further comments you would like to make about this project?**

If you are interested in discussing the proposed options further, we would be happy to support you further understand the potential health impacts of this activity. - laura.pope@southerndhb.govt.nz

Having lived beside the river for 35 years and watched and tided up after floods many times, I don't think putting thing across the floodway, just above main bridge is sensible. large trees come down river like battle ships and could blow out light bridges. Either go under river on use low side of main bridge for pipeline. Does not need to be a major project.

3. Option D: Multi-span bridge at Rock Street
4. Option A: Multi-span bridge at Maitland Street.

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

It's the right place, the others are too far away or to close to the main bridge, would be amazing if horses could cross this bridge also as the main bridge has so much heavy traffic using it, dangerous for horses. This would be great for east Gore foot traffic as well as general walkers, dog walkers and bikers,

Q4. **Are there any further comments you would like to make about this project?**

You need to keep prices down, so we don't go into any more debt, Gore is in far too much debt.

Q1. **What's your preferred option for getting two water pipes across the Mataura River?**

Should we look at combining the water pipes with a walking and cycling bridge?

Q2. **Rank these four options for a bridge from one to four, with number one being your favourite**

1. Option C: Multi-span bridge at Halton Street
2. Option B: Multi-span bridge at Surrey Street
3. Option D: Multi-span bridge at Rock Street
4. Option A: Multi-span bridge at Maitland Street.

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

Option C provides the best access for both sides of the river to access one another. It links nicely to the residential area of East Gore and is an easy distance to town and all its amenities for those coming from East Gore. It also provides those coming from the main side of Gore direct access to Halton street which leads to the main road and then to Hamilton Park. It makes for easy access to continue active transport/walking further down the river to Walnut Grove. Option C also provides easy way finding towards East Gore School and on the way there, there is easy access to Hamilton Street Park and Oxford Street Park which are both the centre of a project to improve play opportunities in East Gore. With this also comes a direct link between Eastern Southland Basketball main stadium (Archer Stadium) and the new community basketball court in Oxford Street Park which is very popular. Having the bridge here also provides opportunity to create many more walking and biking tracks on the East Gore side that could go under the car bridge, link behind the transfer station to the track that connects to the BMX and MTB tracks in Hamilton Park. Plenty of opportunities for GDC to spearhead and prioritise active transport for its residents

Q4. **Are there any further comments you would like to make about this project?**

The Neighbourhood Play Systems project has been working on improving play opportunities in East Gore over the past 2 years. Extensive consultation over 9 months occurred to understand what would make the East Gore residents be more active and play more in their neighbourhood. More high quality and well maintianed walking and cycling tracks was a common theme from this consultations. Also more connection between both sides of the river was popular too. Tamariki in East Gore also mention that when they have to walk to the main side of Gore, the bridge scares them and they dont like walking it. This is a chance for GDC to work with the residents of East Gore and provide them safe access to the rest of Gore. Many more projects promoting active recreation could also stem from the bridge being placed in location C in the years to come

Q1. **What's your preferred option for getting two water pipes across the Mataura River?**

Should we look at combining the water pipes with a walking and cycling bridge?

Q2. **Rank these four options for a bridge from one to four, with number one being your favourite**

1. Option C: Multi-span bridge at Halton Street
2. Option B: Multi-span bridge at Surrey Street
3. Option D: Multi-span bridge at Rock Street
4. Option A: Multi-span bridge at Maitland Street.

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

option C is the perfect location for connecting both sides of the river. Option A is too far away and provides no additional benefit for those wanting to use it. Option D is too close to the car bridge therefore will be loud and wont feel like you are taking a nature walk. Option C would be cool but because the bridge will be long the price will increase, and because it ends in the paddock more money will have to be spent on path ways to get to the bridge.

Q4. **Are there any further comments you would like to make about this project?**

Will the public get to vote on the design also?

Q5. **Name**

Cheyenne Ballantine

Q4. **Are there any further comments you would like to make about this project?**

Keep it simple and logical, No Bridge Bore or trench: The shortest path, little on going maintenance, shortest time frame. Using comparison costs to the MVM boring would be very broadly indicative as this is a very much shorter route. Trenching comparison: the Pyramid bridge replacement blocked part of the river which has similar attributes to trenching across. Bridge options Cons: On going maintenance and inspection. The ends of some of the bridge options are in the flood plain!!. Assumption of LTSA funding! Longer and larger pipe lines, requiring larger pumps additional energy etc to overcome pipeline losses.

Q4. **Are there any further comments you would like to make about this project?**

Waka Kotahi funds still use our money! This is still taxpayer money that doesn't grow on trees, so the total cost should be looked at for all options, not just the ratepayer cost. I believe the options assessment is misleading in this way.

Q1. **What's your preferred option for getting two water pipes across the Mataura River?**

Should we focus on getting the pipeline across the river by drilling underneath it?

Q2. **Rank these four options for a bridge from one to four, with number one being your favourite**

1.

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

not answered

Q4. **Are there any further comments you would like to make about this project?**

Do we need another object to maintain? Under the river is common sense, wouldn't be affected by the weather

not answered

Q4. **Are there any further comments you would like to make about this project?**

No point having another bridge, we can't even look after the we already have eg. needs water blasted and painted. Multi-span bridge would be an eye-sore.

Q4. **Are there any further comments you would like to make about this project?**

Get pipe under river - no eyesore no real maintenance (existing bridge needs de mossed and painted. Cant even look after on bridge let alone a new one). Happy to go under river for Mataura Valley milk why not ratepayers. Cheapest then other options.

Q1. **What's your preferred option for getting two water pipes across the Mataura River?**

Should we look at combining the water pipes with a walking and cycling bridge?

Q2. **Rank these four options for a bridge from one to four, with number one being your favourite**

1. Option B: Multi-span bridge at Surrey Street
2. Option D: Multi-span bridge at Rock Street
3. Option C: Multi-span bridge at Halton Street
4. Option A: Multi-span bridge at Maitland Street.

Q3. **Can you tell us why the option you placed at number one is your favourite option?**

It provides good walking and cycling options for the lowest cost

Q4. **Are there any further comments you would like to make about this project?**

We have to do what we can to get people out of cars and promote walking and cycling.
